

Muckleshoot Segment: SE 368th Place to 180th Street SE

What does this segment look like today?

One lane in each direction; a few dedicated left turn lanes; occasional transit-only turn outs.

SE 368th Place
(Urban Growth Boundary)

180th Street SE

What are the problems?

Congestion: Event-related traffic creates vehicle backups and traffic delay.

Safety & Traffic Backups: School buses making frequent stops create vehicle backups. Unmarked crosswalks and children walking to and from the school bus also create pedestrian safety concerns. Vehicles stopping to make left turns at points on the road without left turn lanes create safety concerns and traffic backups.

Safety: A major portion of this segment is part of a high accident corridor, and one place is classified as a high accident location. Fixed object collisions, vehicle overturns and rear end accidents are the most commonly reported. Tight roadway curves, angled intersections, lighting and visibility problems have also been identified.
